About NEXION Group:

NEXION offers Private Cloud Infrastructure coupled with Public Cloud Products such as Amazon AWS and Microsoft Azure to create a Hybrid Cloud service called OneCloud. NEXION uses software-defined wide-area network (SD-WAN) technology to connect its corporate customers to its OneCloud Nodes. OneCloud Nodes consists of compute and storage capacity, bonded globally via SD-WAN that customers rent to deploy their corporate applications and integrate their operations into public cloud services offered by Microsoft, Amazon and Google etc.

Public clouds offer agility, elasticity and scalability on a global basis. Companies embrace Public Cloud to make their information technology services more responsive to the needs of their businesses. By shifting workloads to the cloud, businesses can make great strides in reducing costs and boosting productivity. This allows them to focus on their core operations and more quickly pivot to new market opportunities.

However, Public Cloud may not always be the best solution. It may be relatively expensive for a particular compute or storage workload, too slow if it is not in region or perceived as less secure than a Private Cloud equivalent. Hybrid Cloud thus evolved as companies embraced different models of Public, Private and on-premises solutions to meet the diverse requirements their business units have, globally.

The Hybrid Cloud segment is one of the fastest growing segments of the IT industry today as corporations accelerate their migration from traditional owner-operated compute resources to pay-as-you-go platforms. NEXION's core business is in the sweet spot of this irreversible trend.

NEXION has focused on deployment and rental of NEXION OneCloud and interconnection of these OneCloud Nodes using SD-WAN networks. NEXION owns its own data centre in Belmont, Western Australia, from which it centrally controls its growing network of OneCloud and Aryaka SD-WAN infrastructure. NEXION is a full-stack information technology service provider offering sales of associated information technology, project management and support services that complement its Hybrid Cloud infrastructure service.
